

## TECHNICAL DATA SHEET

Product

### Mosquito Net

Application	The mosquito net is indicated for the protection against insects. It is an easy mesh to use on wood and other materials, maintaining the normal circulation of the environment. The mosquito net has an aspect of fabric, as its meshes are fine, however, does not block the air passage. Its daily use serves, at the same time, as a protection to the sun (45%/50% of shade). The mosquito net still can be used for other purposes, such as: protection to the entrance of dusts from trees or in rain canalizations of buildings, etc.
Material	HD PE
Mass per unit area, g/m <sup>2</sup>	100
Mesh cell size, mm	1,1 x 1,2-1,3
Linear density of the single yarn (with coating), tex	79
Width, m	0,6; 1,0; 1,2
Length, m	30
Colours	White; black; grey; green
Status	March 2019
